The Story Behind *Silvercare*

In February 2020, both parents of the founder of Silvercare, Pharmacist Chan, were involved in a car crash in Kuantan and were admitted to the hospital in a coma. When he received the call from the hospital, he was totally stunned and didn't know what to say because, at that very moment, he knew that he could have lost the two people he loved the most forever at the same time.

Upon reaching the hospital, it tore his heart to see how traumatized his parents were. His dad had to live on a respirator, and his mother couldn't even recognize him due to the internal bleeding in her brain. Fortunately, his mum finally remembered who he was after 5 days when her condition improved. But trust me, being forgotten by your mother is not an experience that you would ever want to go through again.

During his parents' recovery journey, he faced many problems that he needed to solve to ensure their fast recovery, such as getting their medicines, walking support, preparing their hospital bed, providing oxygen therapy, nutrition, diaper care, and figuring out the proper bathing method, among others.

This left him with a question: If you have no medical background, how in the world are you going to know what to prepare, where to get the equipment, and how to take care of elderly or bedridden patients?

Hence, he decided to set up Silvercare division in Alpro pharmacy all around Malaysia with the aim of helping more people like him.

What is the specialty of Alpro Silvercare?

One Stop Solution for Elderly Care and Post-Discharge Care from the aspects of medicines, nutritions, physiotherapy, rehabilitation equipments and many innovative services.

*Filial Piety*TM
您养我小，我养您老。

What is Filial Piety?

It is our slogan, which in Confucianism means a virtue of respect, love, support and to be good to one's parents and elders. In general, I hope to empower the idea of taking good care of our parents and elders, just like they take good care of us when we were small.

Our vision is to minimize any suffering experienced by elderly or post-discharged patient and maximize their sense of wellness.

Reimagining A True Story...

This Affects 1 In Every 4 Seniors Aged 65 & Above.

Ah Ma shouted for me when she was sleeping...

Ah Ma fell down in her toilet in the room at 3am midnight when she woke up to go to the toilet. She could not move at all after the fall.

The next morning, the son found out she was still lying on the floor, feeling hopeless and crying with despair. Her baju was drenched and she was in the cold the whole night.

Ever since then, Ah Ma has been having nightmares. She couldn't sleep well and often imagined herself going to fall again. She could not focus during day time as she is constantly in fear.

The children are also having difficulty carrying her to the toilet because of the fracture.

This may be the impact of fall for elderly in the house.

She is constantly in pain and result in many health complications and getting weaker.

SO WHAT CAN WE DO TO PREVENT THIS?

It Is Not Just A Fall, It Is A Matter Of Life And Death For Them.

FALLS PREVENTION

for Seniors in our Community

Falls among the elderly are a significant public health concern, often leading to severe injuries and reduced quality of life. According to statistics from the Centers for Disease Control and Prevention (CDC).

“1 in 4 elderly aged 65 and older falls each year.”

Falls are not just accidents, they are often the result of various risk factors, including medical conditions, environmental hazards, and lifestyle choices.

Falls can happen for various reasons, and understanding these causes is the first step in prevention.

CAUSES

Some common causes of falls in the elderly include:

- ▶ **Sarcopenia**
(Age-related Muscle Loss)
- ▶ Accidents
- ▶ Joint Pain

COMMON LOCATIONS OF FALL

Bedroom

Kitchen

Bathroom

Staircase

6 TIPS to PREVENT FALLS

and Keep You or
Your Loved Ones Safe.

1

MEDICATION REVIEW

Many medications, especially those prescribed for various health conditions, can have side effects that affect balance and coordination.

For example, psychoactive medications (e.g. anticonvulsant and antidepressant), antihistamine and medication affecting blood pressure.

It's essential to review your medications regularly with your healthcare provider or pharmacist to identify any potential risks. They can adjust your medication regimen if necessary.

2 MAKE YOUR HOME SAFER

Creating a safe home environment is crucial in fall prevention. Consider the following modifications:

Install night lights in hallways and bathrooms to improve visibility at night.

Install grab bars in the bathroom and near stairs to provide additional support.

Use anti-slip mats in the bathroom to prevent slips and falls.

Remove clutter and tripping hazards from walkways.

“I CAN PREVENT FALL,”

3 USE ASSISTIVE DEVICES

If you experience balance or mobility issues, consider using assistive devices like canes or walkers.

These devices provide stability and support, reducing the risk of falls.

4 REGULAR VISION AND HEARING CHECKS

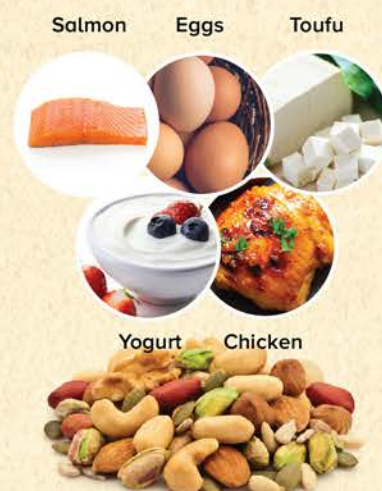

Poor vision and hearing can increase the risk of falls. Schedule regular check-ups with your eye doctor and audiologist to ensure your vision and hearing are at their best.

5 MAINTAIN PROPER NUTRITION

Eat Enough Protein

Ensure daily protein intake (1.0-1.2g/kg/day) for muscle growth. Prioritize quality sources like chicken, fish, beef, eggs, and milk.

If the elderly have difficulty consuming or obtaining enough protein due to issues like reduced appetite or chewing difficulties, they may consider protein supplements. However, they should consult a dietitian or doctor if they have kidney disease.

Remember, it's essential to focus on a balanced diet with a variety of calories, not just protein.

Sufficient Vitamin D

Inadequate vitamin D affects calcium absorption and leads to muscle weakness. Obtain vitamin D from sunlight (10-15 mins, 3-4 times a week) or foods like salmon, egg yolk, and fortified items.

Food alone may not be enough, especially for the elderly, who may require supplements.

6

REGULAR STRENGTH & BALANCE EXERCISES

Engaging in regular strength and balance exercises reduces the rate of fall by 23%. (Catherine Sherrington et al, 2019) Activities such as using a pedal exerciser, resistance bands, or participating in tai chi classes.

“do each exercises for 10 times!”

1. Half Squatting

Stand with feet shoulder-width apart, keep your back straight, squat to a 90-degree angle and hold for 3 seconds

2. Single Leg Stand

Lifting one leg slightly off the ground, hold for 10-30 seconds, then switch legs.

3. Calf Raises

Stand straight with feet hip-width apart, Rise onto tiptoes, pausing briefly at the top, Lower heels back to starting position.

4. Tandem Walking

Take a step forward, heel touching the toes of the other foot, Continue walking this way, heel-to-toe.

5. Core Strengthening

Start on all fours with hands under shoulders and knees under hips, Tighten your core, Extend right arm and left leg straight out, Hold for a few seconds.

Written by :
Siow Sue Swen
Alpro Pharmacist

“

In conclusion

Falls are a serious concern for the elderly in our community, but they are not inevitable.

By taking proactive steps to address the causes of falls and implementing practical strategies to prevent them, we can reduce the risk of injury and maintain our independence. Remember that your community pharmacist is here to support you in this journey.

”

If you have any questions or need further guidance, please don't hesitate to reach out. Together, we can create a safer and healthier community for all.

如果你不是主要照护者，只偶尔回家「沾酱油」请给点时间读一读

每个人都有情绪、都有极限，照护老人家本来就不可能事事完美。面面俱到，只要问自己：「如果我天天守着老妈，睁开眼、闭上眼，都躲不掉照护老人家的大小繁琐之事，我会变得如何？」你就能理解了。

好久前曾上电视谈过【老人照护问题】可能播播的关系，我接到一个邻居的来电。她是一个60多岁的单身者，跟90多岁的妈妈相依为命，妈妈失智退化，所以她承担照护老妈的责任。她说自己没有结婚也没有孩子，非常感谢我在节目中为她们这样的「主要照护者」说些体贴的话。

Ei, I forgot what's this medication taken for?
HOW AH?

Aiyo~ don't worry, just snap a photo & ask in the FB Group!

You can ask whatever you want to know about health.

me Lim is feeling blessed.

其实昨晚po过了，不过不小心手贱不小心delete了。今天想跟大家分享一下，让我体会到一些道理。我已在床上准备睡了，手机响了，来了一封语音信息，是爸爸传来的，说道：「可以过来帮一下我吗？」我不迟疑，就过去了父亲的睡房查看一番。父亲的被子帮他调好pampers的松紧就龙事。结果，想不到的是，一股尿骚味扑鼻而来，颜色还有点带黄的pampers一眼，顿时我火冒三丈+数不尽的埋怨。pampers，我还是使命必达，完成了换pampers的重要任务。后来，在收拾的时候，不察，我才发觉，原来，爸爸是纸尿裤湿了感到非常不适，要我「意思开口」，所以就找了别的借口让我过去。看到爸爸换了pampers后这样快满足了感爆炸了。埋怨的感觉也立刻被压下去了。到了「照护者和被照护者之间其实都是互相需要」... A Digitalized Diabetes Care Program offering affordable, tailored subscription plans to meet all your diabetes management needs.

If you find yourself struggling with blood glucose management alone, SugO365 can help you, finding out the reasons for the highs and lows with you.

If you're uncertain about what to eat for lunch, SugO365 can help you, choosing the options that are not only diabetes-friendly but also satisfy your appetite.

If you are not sure how much carbohydrates to eat during each meal, SugO365 can help, calculating the carbohydrates that you can take, tailored with your eating pattern and lifestyle.

Your *best* Glucose Buddy!

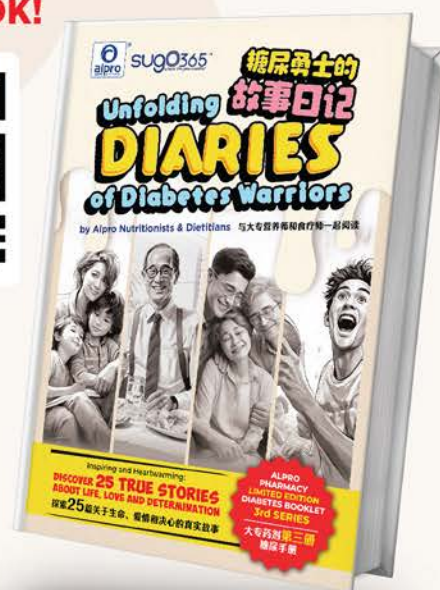

We understand the challenges you face and we are here to hold your hand through them all. With SugO365, you'll receive personalised care from dietitians and nutritionists via a user-friendly mobile app. You'll also receive free face-to-face consultations and valuable diabetes health tips.

Over the past two years, we've proudly published two diabetes booklets, which have benefited thousands of individuals — whether they live with diabetes, have family members who do, or are friends and caregivers. This year, SugO365 team is thrilled to present **"Unfolding Diaries of Diabetes Warriors"** with 25 real stories that reflect the journeys of those living with diabetes. We hope these stories provide strength and inspiration to support your journey with diabetes.

Remember, you are not alone in this fight, SugO365 is ready to support and uplift you for a healthier and happier life. Join us today and regain control over your life with SugO365!

STOP

the **PRESSURE**

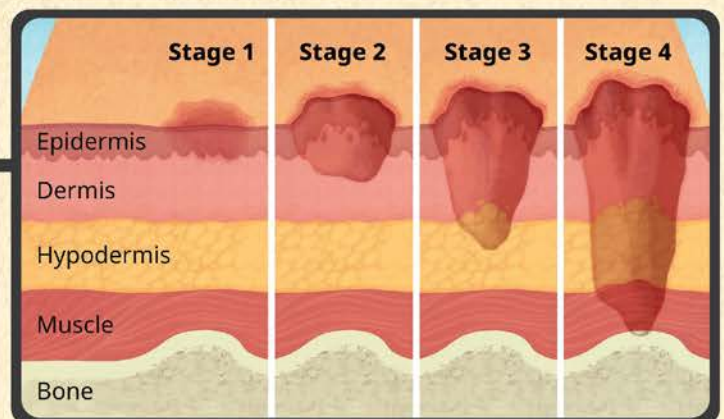

Written by :
Ms. Pearly,
Physiotherapist

What are Pressure Ulcers?

Pressure ulcers, or bedsores occur due to prolonged pressure or friction in the same region, causing reduced blood flow to your skin.

Lacking blood flow can cause the skin cells to die in as fast as 2 hours! As the dead cells break down, a pressure ulcer injury form.

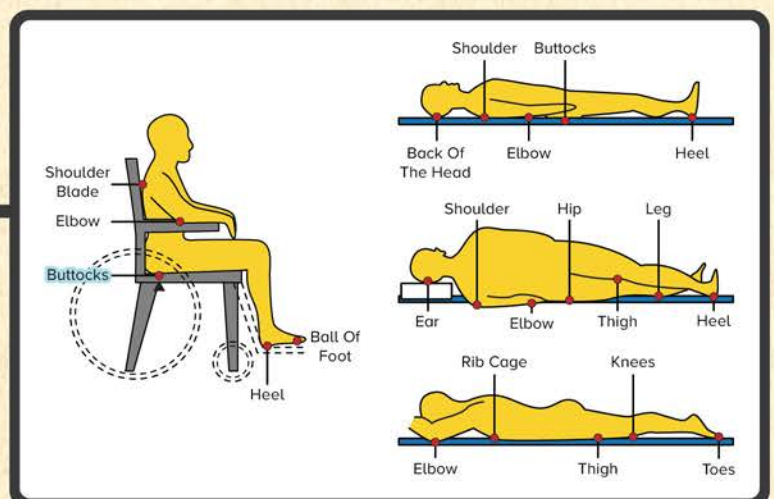

STAGE OF PRESSURE ULCER

Symptoms of Pressure Ulcers

- ▶ Unusual changes in skin color or texture.
- ▶ Swelling.
- ▶ Pus-like draining.
- ▶ An area of skin that feels cooler or warmer to the touch than other areas.
- ▶ Tender areas.

PRESSURE ULCER COMMON SITES

Who is At Risk for Pressure Ulcers?

- ▶ People with thinner skin (eg. Elderly)
- ▶ Limited mobility or bed-ridden
- ▶ In a coma or a vegetative state
- ▶ Chronic paralysis
- ▶ Frequent use of wheelchairs
- ▶ Wear casts, splints, or prosthetic devices

Pressure Ulcer Prevention

The first step in preventing bedsores is reducing the pressure and friction that may cause it.

Some of the methods include:

1

Using support surfaces.

Use a mattress, bed or special cushions that help the patient to sit or lie down in a way that protects fragile skin.

2

Maintain good hygiene

Moisture (eg. Sweat, urine, faeces) can weaken the skin, increasing the risk of pressure sore. Use high absorption diapers, always keep the skin dry and clean, and check if there is any skin redness on pressure points.

3

Repositioning.

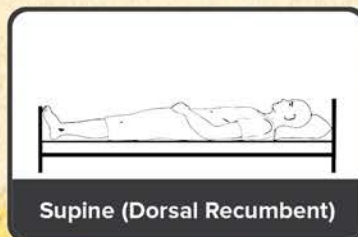

Turn and change the patient's position as often as possible. It is advisable to do this every 2 hour. Additional cushions or special devices could be used to relieve the pressure points.

4

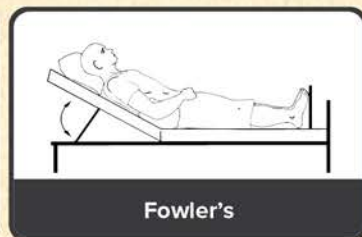

Adequate protein intake

Adequate protein and nutritional intake is essential for maintaining healthy skin tissue and speed up wound healing.

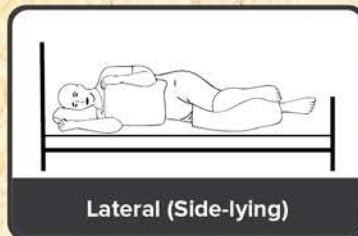

Patient repositioning can be done in different ways, such as:

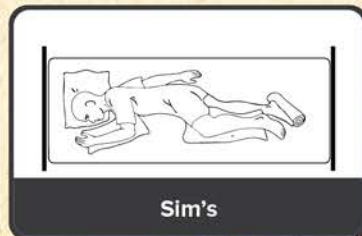

Supine (Dorsal Recumbent)

Fowler's

Lateral (Side-lying)

Sim's

“Is there a better alternative to the strenuous manual repositioning?
THE ANSWER IS YES!”

However, manual repositioning could be tiring and time consuming for a caregiver.

Besides, it increases the risk of lower back injury if the caregiver has poor patient handling skills.

Getting to Know

RIPPLE MATTRESS

Ripple mattress, or air mattress adapts alternating pressure in different compartments to mimic the natural sleeping pattern. The main function of ripple mattress is to relieve pressure points and prevent the formation of pressure ulcers.

Pressure ulcer places a threat to your health! Severe stage of pressure ulcers would increase your risk of life-threatening infections. Besides, you will need to spend a huge amount of time, effort, and money to heal the infected wound.

Ripple Mattress Selection

It is important to select the suitable ripple mattress to ensure progressive recovery and achieving optimum treatment outcomes. Not sure how to pick the best ripple mattress for your loved ones?

Follow these steps as a guideline:

STEP

1

Define the purpose.

Is it for prevention or focusing on ulcer wound care and treatment?

STEP

2

Choose the correct weight capacity.

Each ripple mattress is designed uniquely with different product performance.

STEP

3

Make sure the product is safe to use.

Safety declaration certificates to ensure the ripple mattress is up to standard quality control.

Important Note

Early Detection and **Prevention** is the key in pressure sore management. Taking care of a bed-ridden patient can be much easier with the use of proper pressure ulcer prevention equipment and special devices.

Extra Tips About Diaper

3 Features That A Good Diaper Should Have :

1

Wetness Indicator

Let you know it may be time for a diaper change.

2

Leak Guard Protection System

Provide leakage protection even with frequent movement.

3

Good Absorbency

For excellent absorption capacity and fluid retention to maintain the dryness.

1

Diaper Cream

To protect the skin from urine irritation.

2

Underpad

To protect the bedsheet from wetting due to urine leakage.

Things To Take Note When Using Kneel Brace.

1. Do not wear support or braces while sleeping.
2. Recommended to take off the support or braces and rest for 5 minutes every 2 hours.
3. Over tightness will cause discomfort and affect blood circulation.

All these medical devices registered under Act 737

Pemilihan Alat Bantu Dengar Yang Sesuai

1. Kepentingan ujian pendengaran

Ujian pendengaran adalah sangat penting bagi menentukan tahap dan jenis masalah pendengaran seseorang.

2. Konsultasi bersama Audiologist

Audiologist akan mencadangkan alat bantu dengar yang sesuai kepada pengguna mengikut tahap pendengaran mereka. Ini membolehkan mereka dapat mendengar dan berkomunikasi dengan lebih baik.

Terdapat 5 tahap pendengaran:

Normal 0 - 20 dB	
Ringan 25 - 40 dB	
Sederhana 45 - 70 dB	
Teruk 75 - 90 dB	
Sangat teruk 95 - 120 dB	

3. Percubaan Alat Bantu Dengar

Sebelum beli Alat Bantu Dengar, pengguna digalakkan untuk mencuba terlebih dahulu bagi memastikan alat tersebut selesa untuk digunakan oleh pengguna.

Amplifier vs. Alat Bantu Dengar

Pendengaran

- ✗ **Amplifier**
Boleh menjejaskan lagi pendengaran kerana bunyi yang kuat.
- ✓ **Alat Bantu Dengar**
Tidak menjejaskan pendengaran kerana bunyi yang diberi adalah mengikut tahap pendengaran pengguna.

Percakapan

- ✗ **Amplifier**
Percakapan menjadi tidak jelas terutama di tempat bising.
- ✓ **Alat Bantu Dengar**
Dapat mendengar percakapan dengan lebih baik termasuk di tempat bising.

Kekuatan Bunyi

- ✗ **Amplifier**
Menguatkan bunyi secara keseluruhan.
- ✓ **Alat Bantu Dengar**
Menguatkan bunyi mengikut tahap pendengaran.

Sarcopenia is a condition characterized by the age-related loss of muscle mass, strength, and function. It commonly affects older adults and can have significant consequences on physical health and overall well-being.

Physiotherapy plays a crucial role in managing sarcopenia by addressing the physical aspects of the condition. Physiotherapists closely monitor individuals' progress throughout their treatment. A series of physical assessment will be done by physiotherapists before any treatment given.

4 Elements Of Physio Treatment For Sarcopenia

1

Personalized Muscle Strengthening Exercises

This exercise is a specific exercise program to pin point the specific muscle group to stimulate muscle growth, improve muscle strength, and counteract muscle loss caused by sarcopenia. This personalized approach ensures that the treatment targets the areas of concern and optimizes outcomes.

2

Balance And Coordination Exercises

Sarcopenia can contribute to balance deficits and an increased risk of falls. Physiotherapists include balance and coordination exercises in their treatment approach to improve postural control and reduce the risk of falls. These exercises help enhance balance, stability, and coordination, promoting safer mobility.

3

Functional Training

Training 1-2 muscles will not help. Physiotherapists will incorporate functional training exercises into the treatment plan to improve muscle function and enhancing the ability to perform daily activities with ease and independence. This aim to maintain their functional capacity and improves their quality of life.

4

Education And Lifestyle Modifications

Physiotherapists provide education on lifestyle modifications that support muscle health.
